

Antennas GPS-703-GGG-HV

HIGH VIBRATION PINWHEEL® TRIPLE-FREQUENCY ANTENNA MAXIMIZES TRACKING CAPABILITIES

MAXIMIZE PERFORMANCE WITH MULTI-CONSTELLATION RECEPTION

The GPS-703-GGG-HV receives L1, L2, L5 GPS; L1, L2, L3 GLONASS; B1, B2 BeiDou and E1, E5a/b Galileo frequencies. Customers can use the same antenna for GPS-only, dual or triple constellation applications, resulting in increased flexibility and reduced equipment costs.

STABLE PHASE CENTER

The phase center of this antenna remains constant as the azimuth and elevation angle of the satellites change. Signal reception is unaffected by the rotation of the antenna or satellite elevation, so placement and installation of the antenna can be completed with ease. With the phase center in the same location for the GNSS signals and with minimal phase center variation between antennas, this antenna is ideal for baselines of any length.

DURABLE, FUTURE-PROOF DESIGN

This rugged antenna is enclosed in a durable, waterproof housing and meets MIL-STD-810G for vibration, corrosive environment and salt spray. The GPS-703-GGG-HV is similar in form-factor to our other high performance GPS-700 series antennas with an increased robustness for use under high vibration conditions.

Meeting the European Union's directive for Restriction of Hazardous Substances (RoHS), integrators can be confident the GPS-703-GGG-HV antenna can be used in system designs for years to come.
